Step 4 · Data Quality & Hygiene Remediations

Automated Cleaning & Issue Cards

All | Resolved | Monitored

Real backend audit log — missing cell imputations, record deduplication, outlier detection, and schema normalization.

Backend Data Quality Score

98.8% 41 raw rows → 40 clean rows

1 duplicates removed
2 values imputed

USP ENGINE · COLLECTIVE ISSUE DETECTION

What users are reporting

Semantic grouping found 3 collective issues from 40 reviews.

PAYMENT / CHECKOUT — Critical

Payment / Checkout Failure

12 reports 30% of reviews ↑ 40% Increase

> *"The payment button doesn't work and checkout keeps failing."*

DELIVERY / LOGISTICS — High

Delivery Delay Issues

7 reports 17.5% of reviews ↑ 150% Increase

> *"Delivery was late by two days and the package was damaged."*

PRODUCT QUALITY / DEFECT — High

PRODUCT QUALITY / DEFECT

High

Damaged or Defective Product Received

3 reports 7.5% of reviews ↓ 50% Decrease

> *"The product is good but the packaging was slightly damaged."*

Missing Values Auto-Remediated

Resolved ✓

2 missing cell(s) detected and imputed across dataset fields.

BACKEND ENGINE ACTION

Imputed 1 missing value(s) in 'RevenueUSD' using median (205.0). Imputed 1 missing value(s) in 'ProductCategory' using mode ('Electronics').

Duplicate Records Deduplicated

Deduplicated ✓

1 exact duplicate record(s) detected and removed.

BACKEND ENGINE ACTION

Retained primary instance to prevent statistical skew.

Statistical Outliers in RevenueUSD

Monitored

1 point(s) exceed 1.5× IQR bounds [-17.5, 452.5].

BACKEND ENGINE ACTION

Retained for high-impact insights with robust scaling applied.

Schema Standardization

Standardized ✓

Standardized 6 column types detected (2 Numeric, 1 Categorical, 1 DateTime).

BACKEND ENGINE ACTION

Standardized date formats, stripped whitespace, normalized numeric strings.

Step 6 · Machine Learning & Plain-Language Narrative

Automated Insights & Findings

Machine learning patterns, correlation coefficients, discovered clusters, and plain-language executive summaries.

Copy Narrative

EXECUTIVE AI BRIEFING

Dataset: HACKATHON FULL TEST DATASET

Key Discovered Patterns & Findings

1. [Data Health] Identified 40 records across 6 columns with automatic semantic classification.
2. [Customer Voice] 12 user reports flagged (Critical severity, trend: ↑ 40% Increase).
3. [Emerging Issue] Accelerating complaint volume (↑ 40% Increase) requiring immediate operational attention.
4. [Anomalies] Detected 1 statistical anomalies, with highest concentration in 'RevenueUSD'.
5. [Insight Fusion] A sharp escalation in 'Payment / Checkout Failure' was recorded during recent intervals. Cross-referencing timeline logs with recent operational deployments or service changes is recommended to prevent further metric deterioration.

Prescriptive AI Action Plan

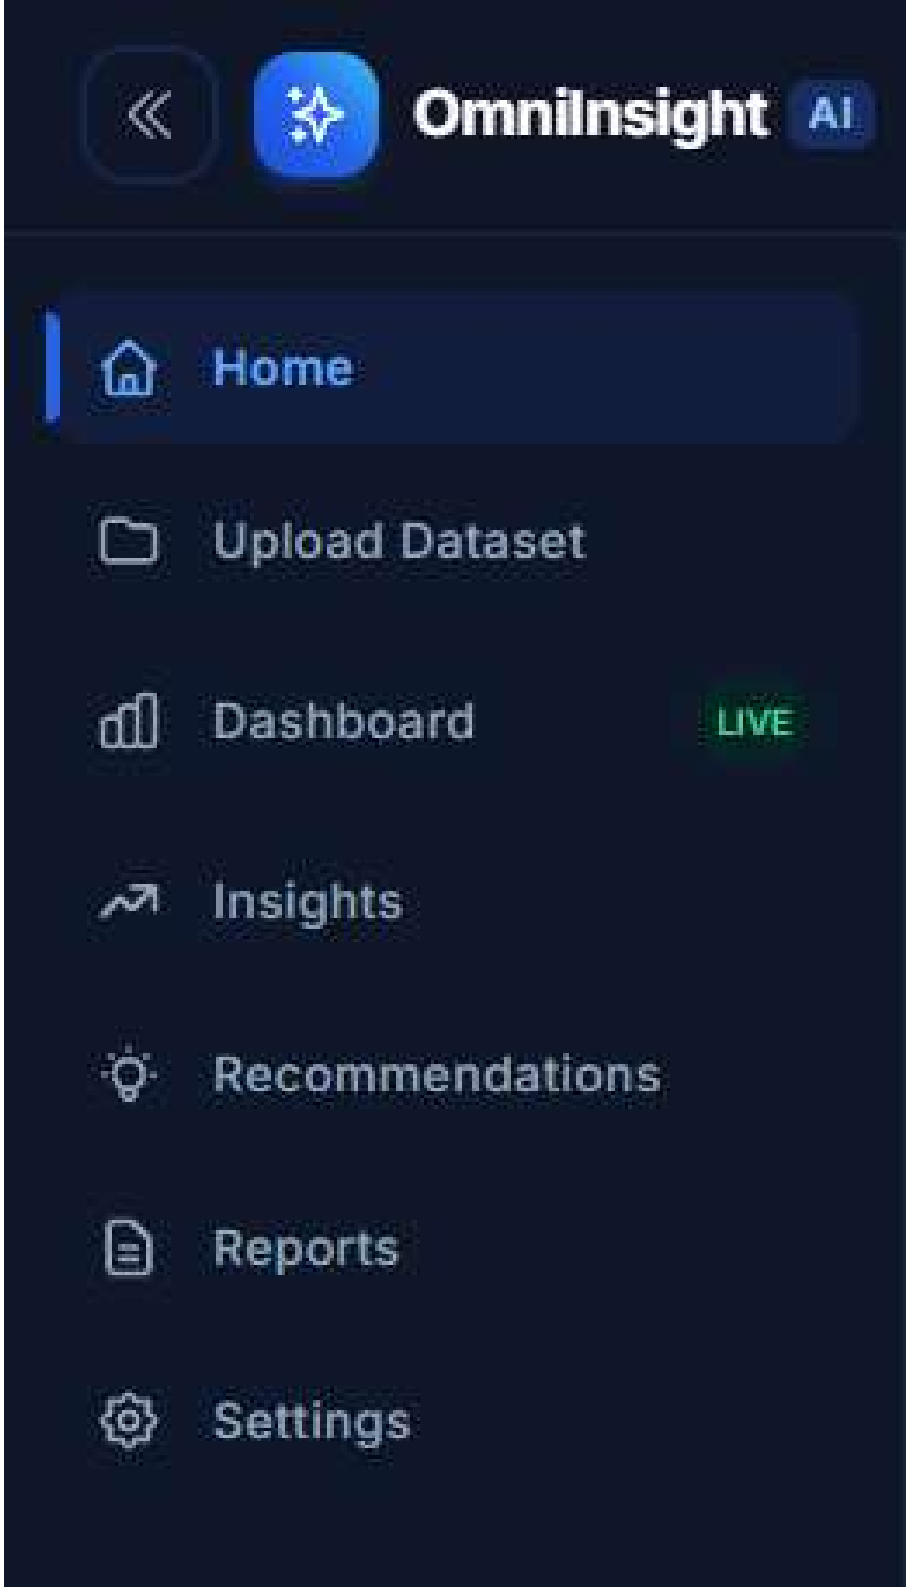

Actionable operational optimizations based on discovered correlations and outliers

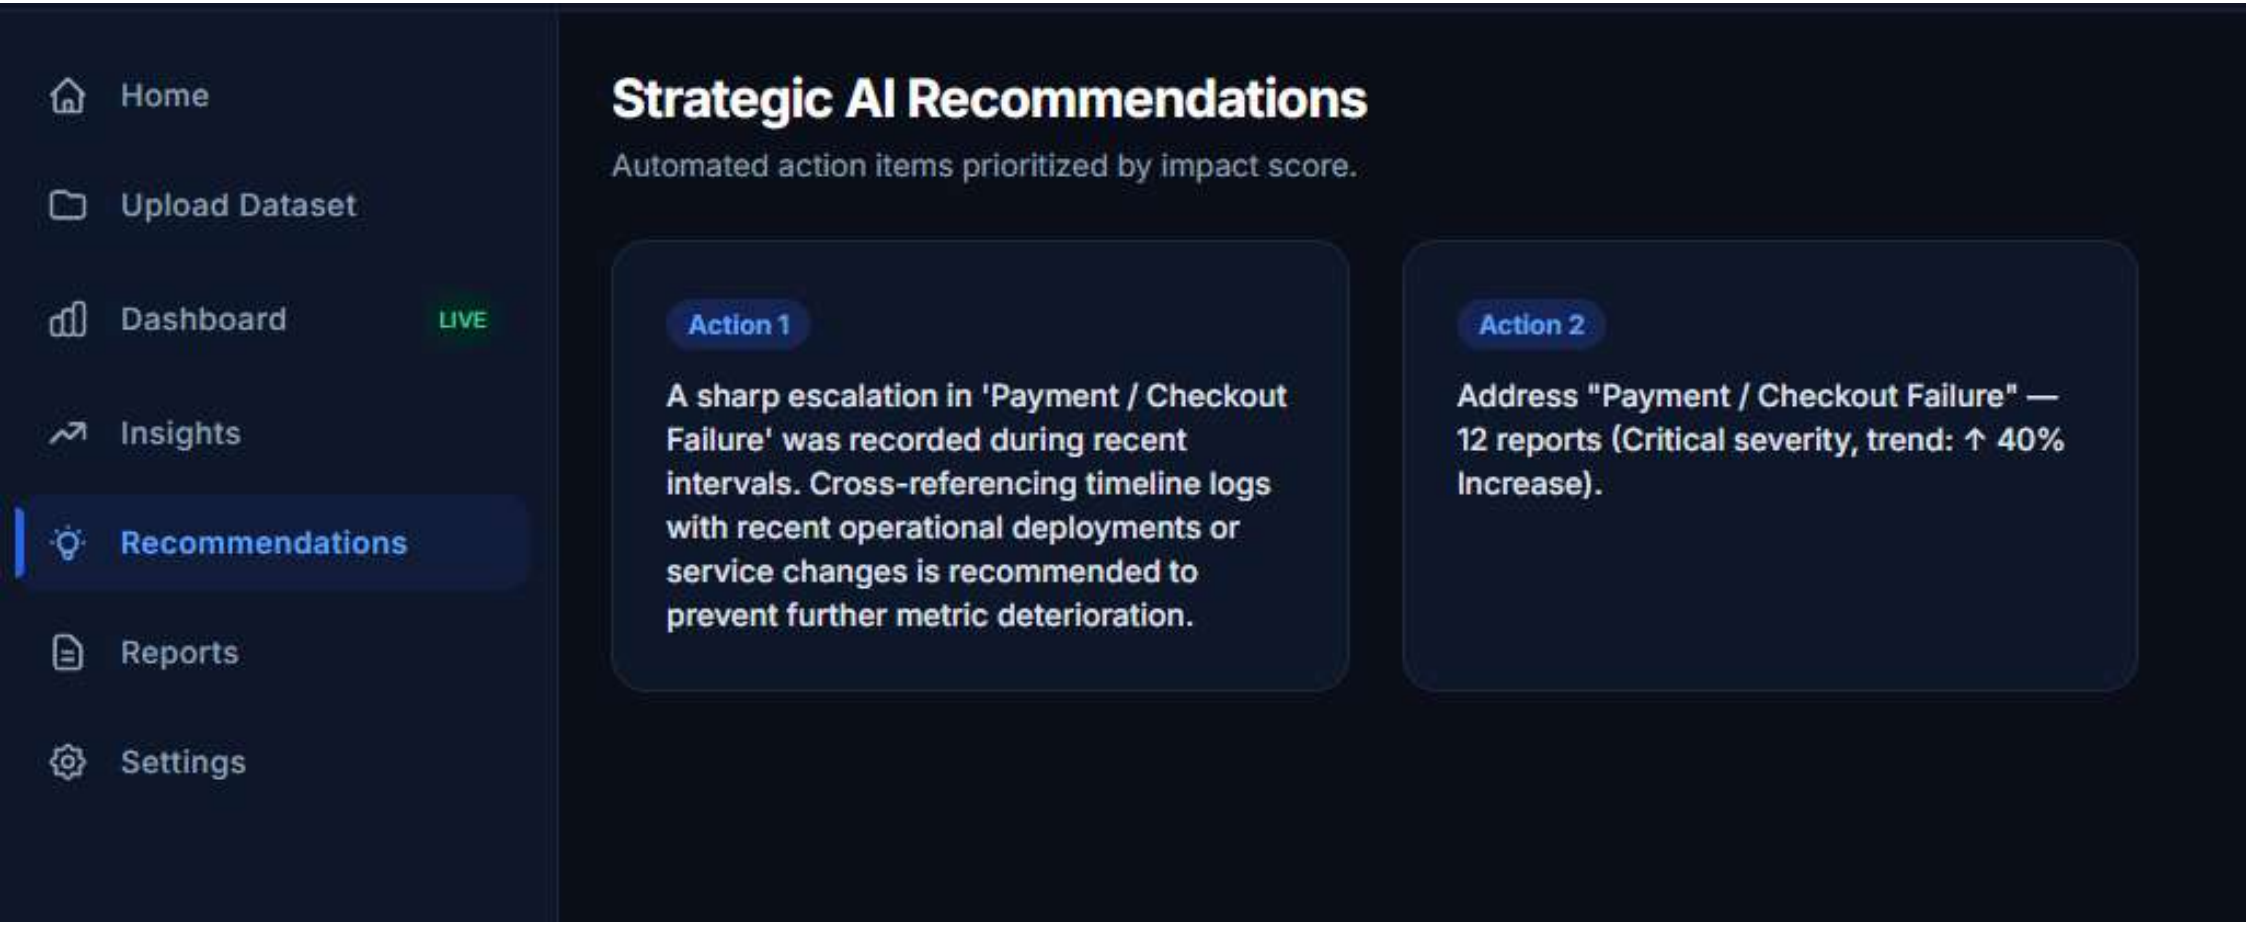

ACTION PRIORITY 01

A sharp escalation in 'Payment / Checkout Failure' was recorded during recent intervals. Cross-referencing timeline logs with recent operational deployments or service changes is recommended to prevent further metric deterioration.

ACTION PRIORITY 02

Address "Payment / Checkout Failure" — 12 reports (Critical severity, trend: ↑ 40% increase).
